Recommended Citation

Editors, JMASM (2011) "Front Matter," *Journal of Modern Applied Statistical Methods*: Vol. 10 : Iss. 1 , Article 1.

DOI: 10.22237/jmasm/1304222400

Available at: <http://digitalcommons.wayne.edu/jmasm/vol10/iss1/1>

This Front Matter is brought to you for free and open access by the Open Access Journals at DigitalCommons@WayneState. It has been accepted for inclusion in Journal of Modern Applied Statistical Methods by an authorized editor of DigitalCommons@WayneState.

Journal Of Modern Applied Statistical Methods

Shlomo S. Sawilowsky

Editor

College of Education
Wayne State University

Harvey Keselman

Associate Editor

Department of Psychology
University of Manitoba

Bruno D. Zumbo

Associate Editor

Measurement, Evaluation, & Research Methodology
University of British Columbia

Vance W. Berger

Assistant Editor

Biometry Research Group
National Cancer Institute

John L. Cuzzocrea

Assistant Editor

Educational Research
University of Akron

Todd C. Headrick

Assistant Editor

Educational Psychology and Special Education
Southern Illinois University-Carbondale

Alan Klockars

Assistant Editor

Educational Psychology
University of Washington

Journal Of Modern Applied Statistical Methods

Invited Articles

- | | | |
|--------|-----------------------|---|
| 2 – 7 | Norman Cliff | A Test that Combines Frequency and Quantitative Information |
| 8 – 18 | Rand R. Wilcox | Comparing the Strength of Association of Two Predictors via Smoothers or Robust Regression Estimators |

Regular Articles

- | | | |
|-----------|--|---|
| 19 – 28 | Daniel J. Mundfrom, Jay Schaffer, Myoung-Jin Kim, Dale Shaw, Ampai Thongteeraparp, Chana Preecha, Pornsin Supawan | Number of Replications Required in Monte Carlo Simulation Studies: A Synthesis of Four Studies |
| 29 – 50 | Jack C. Hill, Shlomo S. Sawilowsky | Bias in Monte Carlo Simulations Due to Pseudo-Random Number Generator Initial Seed Selection |
| 51 – 60 | Housila P. Singh, Sunil Kumar, Sandeep Bhogal | Estimation of Population Mean in Successive Sampling by Sub-Sampling Non-Respondents |
| 61 – 66 | Rajesh Tailor, Balkishan Sharma | Improved Estimation of the Population Mean Using Known Parameters of an Auxiliary Variable |
| 67 – 76 | Tze-San Lee | Matched-Pair Studies with Misclassified Ordinal Data |
| 77 – 96 | Guili Zhang, James Algina | A Robust Root Mean Square Standardized Effect Size in One Way Fixed-Effects ANOVA |
| 97 – 109 | Gordon P. Brooks, George A. Johanson | Sample Size Considerations for Multiple Comparison Procedures in ANOVA |
| 110 – 115 | Sara Mann, James Chowhan | Weighting Large Datasets with Complex Sampling Designs: Choosing the Appropriate Variance Estimation Method |

| | | |
|-----------|--|--|
| 116 – 122 | G. Srinivasa Rao | Double Acceptance Sampling Plans Based on Truncated Life Tests for Marshall-Olkin Extended Lomax Distribution |
| 123 – 131 | Ghassen El Montasser | The Overall F-tests for Seasonal Unit Roots Under Nonstationary Alternatives: Some Theoretical Results and a Monte Carlo Investigation |
| 132 – 138 | Tze-San Lee | Fisher's Exact Test for Misclassified Data |
| 139 – 175 | Ann A. O'Connell, Xing Liu | Model Diagnostics for Proportional and Partial Proportional Odds Models |
| 176 – 191 | Xuemei Pan, C. Mitchell Dayton | Factors Influencing the Mixture Index of Model Fit in Contingency Tables Showing Independence |
| 192 – 197 | Ayman Baklizi, Adil E. Yousif | Inference in Simple Regression for the Intercept Utilizing Prior Information on the Slope |
| 198 – 206 | Sally A. Lesik | New Perspectives in Applying the Regression-Discontinuity Design for Program Evaluation: A Simulation Analysis |
| 207 – 213 | S. N. Martysenko, E. A. Egorov | Information Technology for Increasing Qualitative Information Processing Efficiency |
| 214 – 225 | Madhusudan Bhandary, Koji Fujiwara | An Exact Test for the Equality of Intraclass Correlation Coefficients Under Unequal Family Sizes |
| 226 – 248 | Amery D. Wu, Bruno D. Zumbo, Linda S. Siegel | General Piecewise Growth Mixture Model: Word Recognition Development for Different Learners in Different Phases |
| 249 – 261 | Min Liu, Gregory R. Hancock, Jeffrey R. Harring | Using Finite Mixture Modeling to Deal with Systematic Measurement Error: A Case Study |
| 262 – 267 | Mahmoud M. Smadi, M. T. Alodat | Bayesian Threshold Moving Average Models |

| | | |
|--------------------------|---|--|
| 268 – 276 | S. P. Ahmad, A. A. Khan, A. Ahmed | Bayesian Regression Analysis with Examples in S-PLUS and R |
| 277 – 286 | Miguel A. Padilla, Guili Zhang | Estimating Internal Consistency Using Bayesian Methods |
| 287 – 299 | Joseph L. Balloun, Hilton Barrett, Art Weinstein | One is Not Enough: The Need for Multiple Respondents in Survey Research of Organizations |
| 300 – 312 | John N. Dyer | A Simulation Study of the Relative Efficiency of the Minimized Integrated Square Error Estimator (L2E) for Phase I Control Charting |
| 313 – 321 | Androulla Michaeloudis | Maximum Likelihood Solution for the Linear Structural Relationship with Three Parameters Known |
| 322 – 328 | James F. Reed III | Extension of Grizzle’s Classic Crossover Design |
| 329 – 336 | Ramalingam Shanmugam | Is Next Twelve Months Period Tumor Recurrence Free Under Restricted Rate Due to Medication? A Probabilistic Warning |
| 337 – 348 | Narayan Chanra Sinha, M. Ataharul Islam, Kazi Saleh Ahamed | Logistic Regression Models for Higher Order Transition Probabilities of Markov Chain for Analyzing the Occurrences of Daily Rainfall Data |
| 349 – 361 | Ömer Eğecioğlu, Ayça Ebru Giritligil | The Likelihood of Choosing the Borda- Winner with Partial Preference Rankings of the Electorate |
| <i>Emerging Scholars</i> | | |
| 362 – 372 | Albert K. Adusah*, Gordon P. Brooks | Type I Error Inflation of the Separate- Variances Welch <i>t</i> test with Very Small Sample Sizes when Assumptions Are Met |
| 373 – 402 | P. Borysov, Ping Sa | A Robust One-Sided Variability Control Chart |

*deceased

JMASM is an independent print and electronic journal (<http://www.jmasm.com/>), publishing (1) new statistical tests or procedures, or the comparison of existing statistical tests or procedures, using computer-intensive Monte Carlo, bootstrap, jackknife, or resampling methods, (2) the study of nonparametric, robust, permutation, exact, and approximate randomization methods, and (3) applications of computer programming, preferably in Fortran (all other programming environments are welcome), related to statistical algorithms, pseudo-random number generators, simulation techniques, and self-contained executable code to carry out new or interesting statistical methods.
