Editors, JMASM (2004) "Front Matter," *Journal of Modern Applied Statistical Methods*: Vol. 3 : Iss. 1, Article 1. DOI: 10.22237/jmasm/1083369660 Available at: http://digitalcommons.wayne.edu/jmasm/vol3/iss1/1

This Front Matter is brought to you for free and open access by the Open Access Journals at DigitalCommons@WayneState. It has been accepted for inclusion in Journal of Modern Applied Statistical Methods by an authorized editor of DigitalCommons@WayneState.

# Two Years in the Making...

# Intel® Visual Fortran 8.0

The next generation of Visual Fortran is here! Intel Visual Fortran 8.0 was developed jointly by Intel and the former DEC/Compaq Fortran engineering team.

#### **Visual Fortran Timeline**

**1997** DEC releases Digital Visual Fortran 5.0

**1998** Compaq acquires DEC and releases DVF 6.0

1999 Compaq ships CVF 6.1

2001 Compaq ships CVF 6.6

2001 Intel acquires CVF engineering team

2003 Intel releases Intel Visual Fortran 8.0

#### Intel Visual Fortran 8.0

CVF front-end +
Intel back-end

- Better performance
- OpenMP Support
- Real\*16

### Performance

Outstanding performance on Intel architecture including Intel<sup>®</sup> Pentium<sup>®</sup> 4, Intel<sup>®</sup> Xeon<sup>™</sup> and Intel Itanium<sup>®</sup> 2 processors, as well as support for Hyper-Threading Technology.

### Compatibility

- Plugs into Microsoft Visual Studio\* .NET
- Microsoft PowerStation4 language and library support
- Strong compatibility with Compaq\* Visual Fortran

### Support

1 year of free product upgrades and Intel Premier Support

"The Intel Fortran Compiler 7.0 was first-rate, and Intel Visual Fortran 8.0 is even better. Intel has made a giant leap forward in combining the best features of Compaq Visual Fortran and Intel Fortran. This compiler... continues to be a 'must-have' tool for any Twenty-First Century Fortran migration or software development project."

> -Dr. Robert R. Trippi Professor Computational Finance University of California, San Diego

<i>End Matter</i> 259 - 260	Author	Statistical Pronouncements III	

JMASM is an independent print and electronic journal (http://tbf.coe.wayne.edu/jmasm) designed to provide an outlet for the scholarly works of applied nonparametric or parametric statisticians, data analysts, researchers, classical or modern psychometricians, quantitative or qualitative evaluators, and methodologists. Work appearing in *Regular Articles, Brief Reports*, and *Early Scholars* are externally peer reviewed, with input from the Editorial Board; in *Statistical Software Applications and Review* and *JMASM Algorithms and Code* are internally reviewed by the Editorial Board.

Three areas are appropriate for *JMASM*: (1) development or study of new statistical tests or procedures, or the comparison of existing statistical tests or procedures, using computerintensive Monte Carlo, bootstrap, jackknife, or resampling methods, (2) development or study of nonparametric, robust, permutation, exact, and approximate randomization methods, and (3) applications of computer programming, preferably in Fortran (all other programming environments are welcome), related to statistical algorithms, pseudo-random number generators, simulation techniques, and self-contained executable code to carry out new or interesting statistical methods. Elegant derivations, as well as articles with no take-home message to practitioners, have low priority. Articles based on Monte Carlo (and other computer-intensive) methods designed to evaluate new or existing techniques or practices, particularly as they relate to novel applications of modern methods to everyday data analysis problems, have high priority.

Problems may arise from applied statistics and data analysis; experimental and nonexperimental research design; psychometry, testing, and measurement; and quantitative or qualitative evaluation. They should relate to the social and behavioral sciences, especially education and psychology. Applications from other traditions, such as actuarial statistics, biometrics or biostatistics, chemometrics, econometrics, environmetrics, jurimetrics, quality control, and sociometrics are welcome. Applied methods from other disciplines (e.g., astronomy, business, engineering, genetics, logic, nursing, marketing, medicine, oceanography, pharmacy, physics, political science) are acceptable if the demonstration holds promise for the social and behavioral sciences.
