Two Years in the Making...

Intel® Visual Fortran 8.0

The next generation of Visual Fortran is here! Intel Visual Fortran 8.0 was developed jointly by Intel and the former DEC/Compaq Fortran engineering team.

Visual Fortran Timeline

- 1997** DEC releases Digital Visual Fortran 5.0
- 1998** Compaq acquires DEC and releases DVF 6.0
- 1999** Compaq ships CVF 6.1
- 2001** Compaq ships CVF 6.6
- 2001** Intel acquires CVF engineering team
- 2003** Intel releases Intel Visual Fortran 8.0

Intel Visual Fortran 8.0

- CVF front-end + Intel back-end
- Better performance
- OpenMP Support
- Real*16

Performance

Outstanding performance on Intel architecture including Intel® Pentium® 4, Intel® Xeon™ and Intel Itanium® 2 processors, as well as support for Hyper-Threading Technology.

Compatibility

- Plugs into Microsoft Visual Studio* .NET
- Microsoft PowerStation4 language and library support
- Strong compatibility with Compaq* Visual Fortran

Support

1 year of free product upgrades and Intel Premier Support

“The Intel Fortran Compiler 7.0 was first-rate, and Intel Visual Fortran 8.0 is even better. Intel has made a giant leap forward in combining the best features of Compaq Visual Fortran and Intel Fortran. This compiler... continues to be a ‘must-have’ tool for any Twenty-First Century Fortran migration or software development project.”

—Dr. Robert R. Trippi
Professor Computational Finance
University of California, San Diego

PASS 2002

Power Analysis and Sample Size Software from NCSS

PASS performs power analysis and calculates sample sizes. Use it before you begin a study to calculate an appropriate sample size (it meets the requirements of government agencies that want technical justification of the sample size you have used). Use it after a study to determine if your sample size was large enough. *PASS* calculates the sample sizes necessary to perform all of the statistical tests listed below.

A power analysis usually involves several "what if" questions. *PASS* lets you solve for power, sample size, effect size, and alpha level. It automatically creates appropriate tables and charts of the results.

PASS is accurate. It has been extensively verified using books and reference articles. Proof of the accuracy of each procedure is included in the extensive documentation.

PASS is a standalone system. Although it is integrated with *NCSS*, you do not have to own *NCSS* to run it. You can use it with any statistical software you want.

PASS comes with two manuals that contain tutorials, examples, annotated output, references, formulas, verification, and complete instructions on each procedure. And, if you cannot find an answer in the manual, our free technical support staff (which includes a PhD statistician) is available.

System Requirements

PASS runs on Windows 95/98/ME/NT/2000/XP with at least 32 megs of RAM and 30 megs of hard disk space.

PASS sells for as little as **\$449.95**.

PASS Beats the Competition!

No other program calculates sample sizes and power for as many different statistical procedures as does *PASS*.

Specifying your input is easy, especially with the online help and manual.

PASS automatically displays charts and graphs along with numeric tables and text summaries in a portable format that is cut and paste compatible with all word processors so you can easily include the results in your proposal.

Choose *PASS*. It's more comprehensive, easier-to-use, accurate, and less expensive than any other sample size program on the market.

Trial Copy Available

You can try out *PASS* by downloading it from our website. This trial copy is good for 30 days. We are sure you will agree that it is the easiest and most comprehensive power analysis and sample size program available.

*New in *PASS* 2002

PASS 2002 adds power analysis and sample size to your statistical toolbox

WHAT'S NEW IN PASS 2002?

Thirteen new procedures have been added to *PASS* as well as a new home-base window and a new Guide Me facility.

MANY NEW PROCEDURES

The new procedures include a new multi-factor repeated measures program that includes multivariate tests, Cox proportional hazards regression, Poisson regression, MANOVA, equivalence testing when proportions are correlated, multiple comparisons, ROC curves, and Hotelling's T-squared.

TEXT STATEMENTS

The text output translates the numeric output into easy-to-understand sentences. These statements may be transferred directly into your grant proposals and reports.

GRAPHICS

The creation of charts and graphs is easy in *PASS*. These charts are easily transferred into other programs such as MS PowerPoint and MS Word.

NEW USER'S GUIDE II

A new, 250-page manual describes each new procedure in detail. Each chapter contains explanations, formulas, examples, and accuracy verification.

The complete manual is stored in PDF format on the CD so that you can read and printout your own copy.

GUIDE ME

The new *Guide Me* facility makes it easy for first time users to enter parameter values. The program literally steps you through those options that are necessary for the sample size calculation.

NEW HOME BASE

A new home base window has been added just for *PASS* users. This window helps you select the appropriate program module.

COX REGRESSION

A new Cox regression procedure has been added to perform power analysis and sample size calculation for this important statistical technique.

REPEATED MEASURES

A new repeated-measures analysis module has been added that lets you analyze designs with up to three grouping factors and up to three repeated factors. The analysis includes both the univariate F test and three common multivariate tests including Wilks Lambda.

RECENT REVIEW

In a recent review, 17 of 19 reviewers selected *PASS* as the program they would recommend to their colleagues.

PASS calculates sample sizes for...

Announcing NCSS 2004 Seventeen New Procedures

NCSS 2004 is a new edition of our popular statistical **NCSS** package that adds seventeen new procedures.

New Procedures

Two Independent Proportions
Two Correlated Proportions
One-Sample Binary Diagnostic Tests
Two-Sample Binary Diagnostic Tests
Paired-Sample Binary Diagnostic Tests
Cluster Sample Binary Diagnostic Tests
Meta-Analysis of Proportions
Meta-Analysis of Correlated Proportions
Meta-Analysis of Means
Meta-Analysis of Hazard Ratios
Curve Fitting
Tolerance Intervals
Comparative Histograms
ROC Curves
Elapsed Time Calculator
T-Test from Means and SD's
Hybrid Appraisal (Feedback) Model

Documentation

The printed, 330-page manual, called *NCSS User's Guide V*, is available for \$29.95. An electronic (pdf) version of the manual is included on the distribution CD and in the Help system.

Two Proportions

Several new exact and asymptotic techniques were added for hypothesis testing (null, noninferiority, equivalence) and calculating confidence intervals for the difference, ratio, and odds ratio. Designs may be independent or paired. Methods include: Farrington & Manning, Gart & Nam, Conditional & Unconditional Exact, Wilson's Score, Miettinen & Nurminen, and Chen.

Meta-Analysis

Procedures for combining studies measuring paired proportions, means, independent proportions, and hazard ratios are available. Plots include the forest plot, radial plot, and L'Abbe plot. Both fixed and random effects models are available for combining the results.

Curve Fitting

This procedure combines several of our curve fitting programs into one module. It adds many new models such as Michaelis-Menten. It analyzes curves from several groups. It compares fitted models across groups using computer-intensive randomization tests. It computes bootstrap confidence intervals.

Tolerance Intervals

This procedure calculates one and two sided tolerance intervals using both distribution-free (nonparametric) methods and normal distribution (parametric) methods. Tolerance intervals are bounds between which a given percentage of a population falls.

Comparative Histogram

This procedure displays a comparative histogram created by interspersing or overlaying the individual histograms of two or more groups or variables. This allows the direct comparison of the distributions of several groups.

Random Number Generator

Matsumoto's Mersenne Twister random number generator (cycle length > 10**6000) has been implemented.

Binary Diagnostic Tests

Four new procedures provide the specialized analysis necessary for diagnostic testing with binary outcome data. These provide appropriate specificity and sensitivity output. Four experimental designs can be analyzed including independent or paired groups, comparison with a gold standard, and cluster randomized.

ROC Curves

This procedure generates both binormal and empirical (nonparametric) ROC curves. It computes comparative measures such as the whole, and partial, area under the ROC curve. It provides statistical tests comparing the AUC's and partial AUC's for paired and independent sample designs.

Hybrid (Feedback) Model

This new edition of our hybrid appraisal model fitting program includes several new optimization methods for calibrating parameters including a new genetic algorithm. Model specification is easier. Binary variables are automatically generated from class variables.

Statistical Innovations Products

Through a *special arrangement* with Statistical Innovations (S.I.), NCSS customers will receive \$100 discounts on:

Latent GOLD[®] - latent class modeling

SI-CHAID[®] - segmentation trees

GOLDMineR[®] - ordinal regression

“Perfection is achieved, not when there is nothing more to add, but when there is nothing left to take away.”

- Antoine de Saint Exupery

F is a carefully crafted subset of the most recent version of Fortran, the world’s most powerful numeric language.

Using F has some very significant advantages:

- Programs written in F will compile with any Fortran compiler
- F is easier to use than other popular programming languages
- *F compilers are free* and available for Linux, Windows, and Solaris
- Several books on F are available
- F programs may be linked with C, Fortran 95, or older Fortran 77 programs

F retains the modern features of Fortran—modules and data abstraction, for example—but discards older error-prone facilities of Fortran.

It is a safe and portable programming language.

F encourages Module-Oriented Programming.

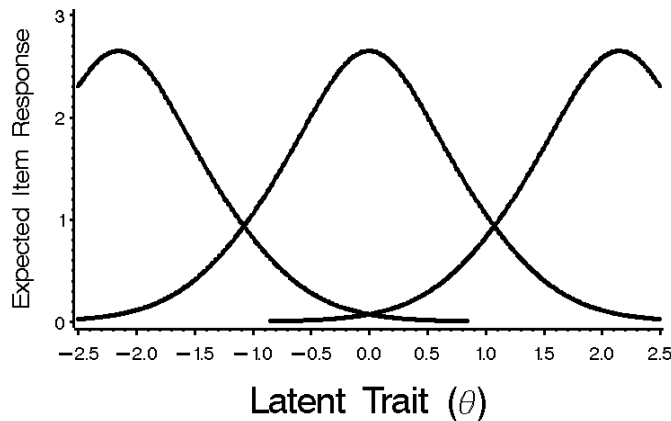

It is ideal for teaching a programming language in science, engineering, mathematics, and finance.

It is ideal for new numerically intensive programs.

Introducing GGUM2004

Item Response Theory Models for Unfolding

The new GGUM2004 software system estimates parameters in a family of item response theory (IRT) models that unfold polytomous responses to questionnaire items. These models assume that persons and items can be jointly represented as locations on a latent unidimensional continuum. A single-peaked, nonmonotonic response function is the key feature that distinguishes unfolding IRT models from traditional, "cumulative" IRT models. This response function suggests

that a higher item score is more likely to the extent that an individual is located close to a given item on the underlying continuum. Such single-peaked functions are appropriate in many situations including attitude measurement with Likert or Thurstone scales, and preference measurement with stimulus rating scales. This family of models can also be used to determine the locations of respondents in particular developmental processes that occur in stages.

The GGUM2004 system estimates item parameters using marginal maximum likelihood, and person parameters are estimated using an expected *a posteriori* (EAP) technique. The program allows for up to 100 items with 2-10 response categories per item, and up to 2000 respondents. GGUM2004 is compatible with computers running updated versions of Windows 98 SE, Windows 2000, and Windows XP. The software is accompanied by a detailed technical reference manual and a new Windows user's guide. **GGUM2004 is free** and can be downloaded from:

<http://www.education.umd.edu/EDMS/tutorials>

GGUM2004 improves upon its predecessor (GGUM2000) in several important ways:

- It has a user-friendly graphical interface for running commands and displaying output.
- It offers real-time graphics that characterize the performance of a given model.
- It provides new item fit indices with desirable statistical characteristics.
- It allows for missing item responses assuming the data are missing at random.
- It allows the number of response categories to vary across items.
- It estimates model parameters more quickly.

Start putting the power of unfolding IRT models to work in your attitude and preference measurement endeavors. Download your free copy of GGUM2004 today!

Are you involved in Data Modeling or Data Mining?

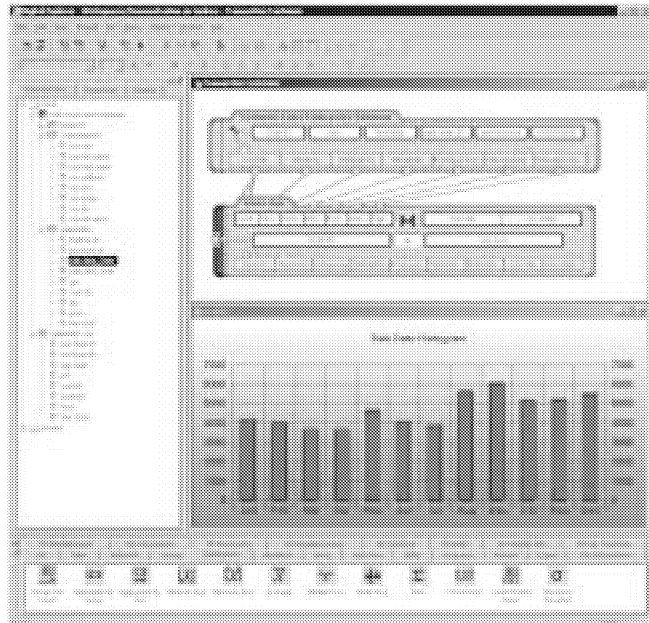

Are you spending a large percentage of your time dealing with data issues?

If so, you will be happy to know that we have developed a tool that specifically addresses the data prep tasks associated with data modeling and data mining. The tool is called the Digital Excavator from Digital Archaeology (www.digarch.com). Data modelers are well aware of the time-consuming and sometimes frustrating nature of data set-up. In many cases data preparation can represent 60%-80% of the data mining project length. With Digital Archaeology's Digital Excavator, data preparation tasks are streamlined, results are more accurate, and the modeler has more time to focus on finding the appropriate mathematical solution--rather than wasting time with painful data issues. Digital Archaeology's software is intuitive, visual, self-documenting, and deploys what a number of analysts and customers have termed the "most elegant" user interface for data analysis and exploration ever conceived. It's the only tool specifically designed for the data prep tasks of data modeling.

Visit our website and see for yourself! >>>> www.digarch.com

Functions have been created which perform the following:

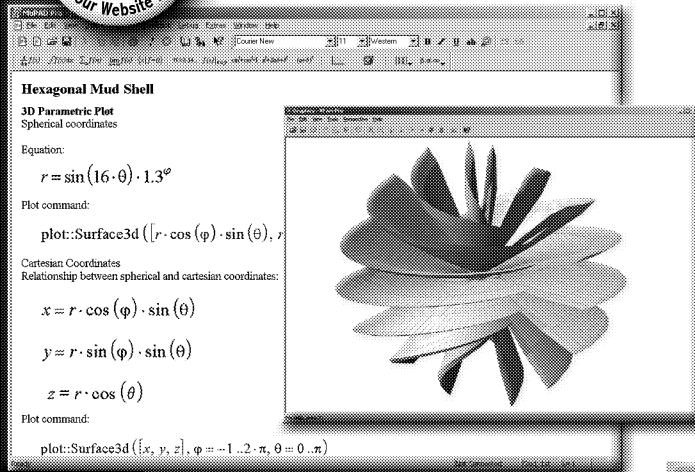

- Frequency Distributions
- Categorical Variable Profile
- Continuous Variable Profile
- Histograms
- De-duping
- Find and Replace Missing Values
- Find and Split Out Outliers
- Binning
- Correlation Matrix
- Cross-Tabs
- Panel Variables (Occupancy Map)
- Lag functions
- Decimal Scaling
- Rank and Sample Variables
- Recency, Frequency, Monetary Analysis
- N-Tile Distributions
- Gains Charts

The Open Computer Algebra System

MacKichan Software is proud to bring you MuPAD Pro, a full-featured computer algebra system in an integrated and open environment for symbolic and numeric computing. The MuPAD language has a Pascal-like syntax and allows imperative, functional, and object-oriented programming. Its domains and categories are like object-oriented classes that allow over-riding and overloading methods and operators, inheritance, and generic algorithms. A comfortable notebook interface includes a graphics tool for visualization, an integrated source-level debugger, a profiler, and hypertext help.

Scientific WorkPlace, the proven solution for mathematical publishing, is an excellent companion to MuPAD Pro. It integrates with MuPAD so that you can evaluate, simplify, solve, and plot from inside your document, and evaluate functions that you have defined with MuPAD. Best of all, you typeset in LaTeX with just the click of a button.

Announcing the highly-anticipated new Numerical Recipes products

Numerical Recipes in C++

The Art of Scientific Computing
Second Edition

William H. Press, Saul A. Teukolsky,
William T. Vetterling, and
Brian P. Flannery

"This monumental and classic work is beautifully produced and of literary as well as mathematical quality. It is an essential component of any serious scientific or engineering library."

—*Computing Reviews*

This new version incorporates completely new C++ versions of the more than 300 *Numerical Recipes Second Edition* routines widely recognized as the most accessible and practical basis for scientific computing, in addition to including the full mathematical and explanatory contents of *Numerical Recipes in C*.

Key Features:

- Includes linear algebra, interpolation, special functions, random numbers, nonlinear sets of equations, optimization, eigensystems, Fourier methods and wavelets, statistical tests, ODEs and PDEs, integral equations, and inverse theory.
- The routines, in ANSI/ISO C++ source code, can be used with almost any existing C++ vector/matrix class library, according to user preference

0-521-75033-4, Hardback, \$70.00

Visit us.cambridge.org/numericalrecipes for more information on the complete line of Numerical Recipes products.

Available in bookstores or from

Numerical Recipes in Fortran 77

Volume 1 of Fortran Numerical Recipes
Second Edition

*William H. Press, Saul A. Teukolsky,
William T. Vetterling, and Brian P. Flannery*

"This reviewer knows of no other single source of
so much material of this nature. Highly recommended."

—*Choice*

"...a valuable resource for those with a specific need for
numerical software. The routines are prefaced with lucid, self-
contained explanations...highly recommended for those who
require the use and understanding of numerical software."

—*SIAM Review*

1992 992 pp. 0-521-43064-X Hardback \$70.00

Highlights include:

- A chapter on integral equations and inverse methods
- Multigrid and other methods for solving partial differential equations
- Improved random number routines
- Wavelet transforms
- The statistical bootstrap method
- A chapter on "less-numerical" algorithms including compression coding and arbitrary precision arithmetic.

announces

PermuteltTM v2.0

The fastest, most comprehensive and robust permutation test software on the market today.

Permutation tests increasingly are the statistical method of choice for addressing business questions and research hypotheses across a broad range of industries. Their distribution-free nature maintains test validity where many parametric tests (and even other nonparametric tests), encumbered by restrictive and often inappropriate data assumptions, fail miserably. The computational demands of permutation tests, however, have severely limited other vendors' attempts at providing useable permutation test software for anything but highly stylized situations or small datasets and few tests. PermuteltTM addresses this unmet need by utilizing a combination of algorithms to perform non-parametric permutation tests very quickly – often more than an order of magnitude faster than widely available commercial alternatives when one sample is large and many tests and/or multiple comparisons are being performed (which is when runtimes matter most). PermuteltTM can make the difference between making deadlines, or missing them, since data inputs often need to be revised, resent, or recleaned, and one hour of runtime quickly can become 10, 20, or 30 hours.

In addition to its speed even when one sample is large, some of the unique and powerful features of PermuteltTM include:

- the availability to the user of a wide range of test statistics for performing permutation tests on continuous, count, & binary data, including: pooled-variance t-test; separate-variance Behrens-Fisher t-test, scale test, and joint tests for scale and location coefficients using nonparametric combination methodology; Brownie et al. "modified" t-test; skew-adjusted "modified" t-test; Cochran-Armitage test; exact inference; Poisson normal-approximate test; Fisher's exact test; Freeman-Tukey Double Arcsine test
- extremely fast exact inference (no confidence intervals – just exact p-values) for most count data and high-frequency continuous data, often several orders of magnitude faster than the most widely available commercial alternative
- the availability to the user of a wide range of multiple testing procedures, including: Bonferroni, Sidak, Stepdown Bonferroni, Stepdown Sidak, Stepdown Bonferroni and Stepdown Sidak for discrete distributions, Hochberg Stepup, FDR, Dunnett's one-step (for MCC under ANOVA assumptions), Single-step Permutation, Stepdown Permutation, Single-step and Stepdown Permutation for discrete distributions, Permutation-style adjustment of permutation p-values
- fast, efficient, and automatic generation of all pairwise comparisons
- efficient variance-reduction under conventional Monte Carlo via self-adjusting permutation sampling when confidence intervals contain the user-specified critical value of the test
- maximum power, and the shortest confidence intervals, under conventional Monte Carlo via a new sampling optimization technique (see Opdyke, JMASM, Vol. 2, No. 1, May, 2003)
- fast permutation-style p-value adjustments for multiple comparisons (the code is designed to provide an additional speed premium for many of these resampling-based multiple testing procedures)
- simultaneous permutation testing and permutation-style p-value adjustment, although for relatively few tests at a time (this capability is not even provided as a preprogrammed option with any other software currently on the market)

For Telecommunications, Pharmaceuticals, fMRI data, Financial Services, Clinical Trials, Insurance, Bioinformatics, and just about any data rich industry where large numbers of distributional null hypotheses need to be tested on samples that are not extremely small and parametric assumptions are either uncertain or inappropriate, PermuteltTM is the optimal, and only, solution.

To learn more about how PermuteltTM can be used for your enterprise, and to obtain a demo version, please contact its author, J.D. Opdyke, President, DataMineltSM, at JDOpdyke@DataMinelt.com or www.DataMinelt.com.

DataMineltSM is a technical consultancy providing statistical data mining, econometric analysis, and data warehousing services and expertise to the industry, consulting, and research sectors. PermuteltTM is its flagship product.

JOIN DIVISION 5 OF APA!

The Division of Evaluation, Measurement, and Statistics of the American Psychological Association draws together individuals whose professional activities and/or interests include assessment, evaluation, measurement, and statistics. The disciplinary affiliation of division membership reaches well beyond psychology, includes both members and non-members of APA, and welcomes graduate students.

Benefits of membership include:

- subscription to *Psychological Methods* or *Psychological Assessment* (student members, who pay a reduced fee, do not automatically receive a journal, but may do so for an additional \$18)
- *The Score* – the division's quarterly newsletter
- Division's Listservs, which provide an opportunity for substantive discussions as well as the dissemination of important information (e.g., job openings, grant information, workshops)

Cost of membership: \$38 (**APA membership not required**); student membership is only \$8

For further information, please contact the Division's Membership Chair, Yossef Ben-Porath (ybenpora@kent.edu) or check out the Division's website:

<http://www.apa.org/divisions/div5/>

ARE YOU INTERESTED IN AN ORGANIZATION DEVOTED TO EDUCATIONAL AND BEHAVIORAL STATISTICS?

Become a member of the **Special Interest Group - Educational Statisticians** of the American Educational Research Association (SIG-ES of AERA)!

The mission of SIG-ES is to increase the interaction among educational researchers interested in the theory, applications, and teaching of statistics in the social sciences.

Each Spring, as part of the overall AERA annual meeting, there are seven sessions sponsored by SIG-ES devoted to educational statistics and statistics education.
We also publish a twice-yearly electronic newsletter.

Past issues of the SIG-ES newsletter and other information regarding SIG-ES can be found at <http://orme.uark.edu/edstatsig.htm>

To join SIG-ES you must be a member of AERA. Dues are \$5.00 per year.

For more information, contact Joan Garfield, President of the SIG-ES, at jbg@umn.edu.

The easy way to find open access journals

DOAJ DIRECTORY OF
OPEN ACCESS
JOURNALS

www.doaj.org

The Directory of Open Access Journals covers free, full text, quality controlled scientific and scholarly journals. It aims to cover all subjects and languages.

Aims

- Increase visibility of open access journals
- Simplify use
- Promote increased usage leading to higher impact

Scope

The Directory aims to be comprehensive and cover all open access scientific and scholarly journals that use a quality control system to guarantee the content. All subject areas and languages will be covered.

In DOAJ browse by subject

Agriculture and Food Sciences
Biology and Life Sciences
Chemistry
General Works
History and Archaeology
Law and Political Science
Philosophy and Religion
Social Sciences

Arts and Architecture
Business and Economics
Earth and Environmental Sciences
Health Sciences
Languages and Literatures
Mathematics and statistics
Physics and Astronomy
Technology and Engineering

Instructions For Authors

Follow these guidelines when submitting a manuscript:

1. *JMASM* uses a modified American Psychological Association style guideline.
2. Submissions are accepted via e-mail only. Send them to the Editorial Assistant at ea@edstat.coe.wayne.edu. Provide name, affiliation, address, e-mail address, and 30 word biographical statements for all authors in the body of the email message.
3. There should be no material identifying authorship except on the title page. A statement should be included in the body of the e-mail that, where applicable, indicating proper human subjects protocols were followed, including informed consent. A statement should be included in the body of the e-mail indicating the manuscript is not under consideration at another journal.
4. Provide the manuscript as an external e-mail attachment in MS Word for the PC format only. (Wordperfect and .rtf formats may be acceptable - please inquire.) Please note that Tex (in its various versions), Exp, and Adobe .pdf formats are designed to produce the final presentation of text. They are not amenable to the editing process, and are not acceptable for manuscript submission.
5. The text maximum is 20 pages double spaced, not including tables, figures, graphs, and references. Use 11 point Times Roman font. If the technical expertise is available, submit the manuscript in two column format.
6. Create tables without boxes or vertical lines. Place tables, figures, and graphs “in-line”, not at the end of the manuscript. Figures may be in .jpg, .tif, .png, and other formats readable by Adobe Illustrator or Photoshop.
7. The manuscript should contain an Abstract with a 50 word maximum, following by a list of key words or phrases. Major headings are Introduction, Methodology, Results, Conclusion, and References. Center headings. Subheadings are left justified; capitalize only the first letter of each word. Sub-subheadings are left-justified, indent optional.
8. Do not use underlining in the manuscript. Do not use bold, except for (a) matrices, or (b) emphasis within a table, figure, or graph. Do not number sections. Number all formulas, tables, figures, and graphs, but do not use italics, bold, or underline. Do not number references. Do not use footnotes or endnotes.
9. In the References section, do not put quotation marks around titles of articles or books. Capitalize only the first letter of books. Italicize journal or book titles, and volume numbers. Use “&” instead of “and” in multiple author listings.
10. *Suggestions for style*: Instead of “I drew a sample of 40” write “A sample of 40 was selected”. Use “although” instead of “while”, unless the meaning is “at the same time”. Use “because” instead of “since”, unless the meaning is “after”. Instead of “Smith (1990) notes” write “Smith (1990) noted”. Do not strike spacebar twice after a period.

Print Subscriptions

Print subscriptions including postage for professions is US \$60 per year; graduate students is US \$30 per year; and libraries, universities, and corporations is US \$195 per year. Subscribers outside of the US and Canada pay a US \$10 surcharge for additional postage. Online access is currently free at <http://tbf.coe.wayne.edu/jmasm>. Mail subscription requests with remittances to JMASM, P. O. Box 48023, Oak Park, MI, 48237. Email journal correspondence, other than manuscript submissions, to jmasm@edstat.coe.wayne.edu.

NEW IN 2004

significance

statistics making sense

The new magazine of the
Royal Statistical Society

Edited by Helen Joyce

Significance is a new quarterly magazine for anyone interested in statistics and the analysis and interpretation of data. It aims to communicate and demonstrate, in an entertaining and thought-provoking way, the practical use of statistics in all walks of life and to show how statistics benefit society.

Articles are largely non-technical and hence accessible and appealing, not only to members of the profession, but to all users of statistics.

As well as promoting the discipline and covering topics of professional relevance, **Significance** contains a mixture of statistics in the news, case-studies, reviews of existing and newly developing areas of statistics, the application of techniques in practice and problem solving, all with an international flavour.
