“Alaska Peninsula Stable Isotope and Radioisotope Chemistry: A Study in Temporal and Adaptive Diversity,” by Joan Brenner Coltrain, *Human Biology* 82(5–6):613–627 (October–December 2010).

In this article, Figure 2 is not the author’s final version. The correct figure is provided below. The editorial office regrets this error and apologizes to the author and readers.

Figure 2. Calibrated AMS confidence interval median dates and 2σ ranges plotted by site in years before present. ^{14}C dates were measured on purified bone collagen and calibrated on Calib 6.0 with the calibration data set Marine/INTCAL09. Global and regional reservoir effects (ΔR) were scaled relative to percent marine intake calculated from $\delta^{13}\text{C}$ values reported here.
