Detroit Food Metrics Report 2017

Alex B. Hill
Amy Kuras
DETROIT
Food
Metrics
Report
2017
This report provides a snapshot of data and information on Detroit’s food system as well as trends over time. The report includes a broad range of programs and initiatives that local organizations, the Detroit Food Policy Council, and the City of Detroit are undertaking to address food insecurity, increase healthy food access and awareness, and support a more sustainable and just food system.

SUGGESTED CITATION
INTRODUCTION

The Detroit food system is garnering buzz nationally and locally - urban farms, farm-to-table restaurants, and big chain retail grocers are spurring media coverage, sparking insightful conversation, and drawing consumer, investor, and foundation funding. Among all the excitement is the risk that the new will overshadow the persistent inequity and food access issues faced by many Detroiters.

Detroit has the chance to show how a growing food system can benefit everyone as long as we keep equity at the center of our work.
FOOD SYSTEMS

A food system is everything from field to fork and back again.

There are many important steps along the way that are typically unseen, such as the manufacturing and application of farm inputs (fertilizers, pesticides, seeds), the processing and packaging of food products, and the management of food waste. The food system also includes both the human actors and the natural resources needed to keep it moving.

A healthy and sustainable food system encompasses the goals of social equity and human health, economic vitality, and environmental health. A sustainable food system exists when production, processing, distribution, access, consumption, and waste management are integrated and these practices improve or maintain natural resources, are just and accessible, and support the resilience of local communities and economies.

In Detroit, there are many different stakeholders within each food sector.

TIMELINE: DETROIT FOOD POLICY

2006  Detroit Black Community Food Security Network (DBCFSN) drafts Food Security Policy

2008  Detroit Public Schools (DPS) brings school nutrition in-house to improve quality

2009  Detroit Food Policy Council (DFPC) forms after City Council adopts the DBCFSN Food Security Policy

2012  DPS launches Farm-to-School program

2013  Urban Agriculture Ordinance adopted by City Council

2014  DPS launches Detroit School Garden Collaborative with Greening of Detroit, UWSEM, MSU Extension, and other partners

2016  Food Security Policy updated by DFPC through community outreach and engagement efforts
      Internal Food Policy Workgroup formed (City of Detroit, Office of Sustainability)

2017  Health Department creates Food Access Program Manager position to coordinate activities
BY THE NUMBERS

~30k people without access to a full-line grocer

48% of households food insecure

40% of households using SNAP

74 full-line grocery stores

19% of children enrolled in WIC

18% SNAP eligible households not enrolled

---

1 Detroit Food Map Initiative. based on Census Bureau, ACS 2015 5-year estimates.
4 Detroit Health Department, WIC Program
5 Census Bureau, ACS 2015 5-year estimates.
75% of produce from Drew Farm into school cafeterias

432 community gardens

17 farmers markets and farm stands

36,000 jobs in food system

$178M annual loss in grocery retail revenue in Detroit

$3.7B total annual revenue from the food system

---

1. Understanding the Food & Health Connection

HEALTH

It is no wonder that the food we eat impacts our day-to-day health and well-being. Food provides our minds and bodies with the fuel to think, move, and play.

A Healthier City Begins with Food!

Physical environments, neighborhoods, and cities are often the focus for improving food access, but complicated social and service environments have the greatest impact on our health. One of the most important aspects of a healthy food system is good paying jobs. A preliminary study of food consumption behavior found that family income rather than location was a primary driver for eating more fresh produce.

- Health Care

CHRONIC DISEASE

In the 2013-2015 Michigan Behavioral Risk Factor Survey (BRFSS) 3-year averages, Detroit ranked second in the state with 36.8% of the adult population with obesity. Detroit’s obesity rate also ranked highest among other large metropolitan areas. The city has some of the highest rates in the country for chronic disease, appearing in the top 10 out of 500 cities for obesity (#2), heart disease (#10), and diabetes (#2).
DIET-RELATED DEATHS

Health conditions and diseases like obesity, diabetes, and heart disease can lead to health complications and untimely death. The disastrous impact of poor diet on our health is widely known, and yet still underestimated. Four of the top ten leading causes of death in the United States can be linked to poor diet: heart disease, cancer, stroke, and diabetes. In 2014 alone, heart disease killed 633,842 Americans. Diets that are high in sugar, trans fats, and preservatives put strain on the heart, liver, kidneys, colon, and can cause system-wide inflammatory responses that are detrimental to long-term health.

Americans need access to nutritious foods, but they also need education on making the right choices. That is why food policy is so important and the collaborators who work to improve systems and impact communities play a critical role.

14% of Detroit adults told they have diabetes

“Poor diet generates a bigger non-communicable disease (NCD) burden than tobacco, alcohol, and physical activity combined.”

HEART DISEASE MORTALITY IN DETROIT 2000 - 2014

2.
Increasing Healthy Food Access & Awareness

HEALTHY FOOD ACCESS

As early as 2004, research conducted in Detroit labeled the city a food desert.19 The official designation of “food desert” is determined by the USDA as part of the Healthy Food Financing Initiative (HFFI)20 and includes low-income areas as determined by the New Market Tax Credits (NMTC).21

The areas of Detroit designated as “food deserts” are few, but have expanded between 2010 and 2015 to include more areas of the city that have had grocery store closings. Urban areas that have more than 20% of residents in poverty and don’t have a grocery store within a one-mile radius are given the “food desert” label. However, the increase in “food desert” areas didn’t account for the opening of a 2nd Meijer store on Grand River Ave. or the reopening of Parkway Foods on E. Jefferson Ave.

Despite these designations, the majority of Detroit is not a geographic “food desert” as much as it is an “opportunity desert” where income, time, and transportation exacerbate lack of access to good food for health and nutrition.

16% of Detroit adults eat 5 or more fruits & vegetables a day22

While the “food desert” data is flawed, it is the standard by which the Federal government and, specifically, the USDA issues funding and incentives for various food programs and policies.

---

21 New Market Tax Credits. https://www.cdfifund.gov/programs-training/Programs/new-markets-tax-credit/Pages/default.aspx

The USDA's 2015 “food desert” designated areas are based on national retail databases that have been shown to undercount Detroit assets.23

Looking at areas of green and orange that overlap in the map to the left highlights the mismatch in federal food policy in Detroit’s city context.

These maps only look to assessments within Detroit’s city limits. Many border areas of Detroit are served by grocers in nearby cities.

FOOD RETAILERS

Detroit has had a robust food business scene throughout its over 300-year-long history. As a frontier town and later the 4th largest city in the United States, Detroit was never short on people growing, making, and selling food in the city.

Today Detroit food retail is dominated by independently owned grocery stores throughout the city’s neighborhoods that serve as community anchors for food access. However, food is available and purchased at a number of secondary locations in the city including convenience stores and dollar stores.\(^{24}\)

2017 NUMBERS

Full-line grocery stores: 74
Convenience stores: 49
Dollar stores: 73

\(^{24}\) Hill, Alex B. “‘Treat everybody right:’ Multidimensional Foodways in Detroit.” Wayne State University, (2016).

1,221 SNAP Retailers\(^{25}\)

**FARMERS MARKETS**

Efforts to address transportation-related access issues to fresh produce in Detroit have focused on farmers markets and similar programs, such as Eastern Market’s Farm Stands and Fresh Corner Cafe’s Pop-up Farmers Markets.

Many local nonprofits, health systems, and corporations host Farm Stand and Pop-Up Markets in order to increase access to fresh produce for their residents, patients, employees and students.

Five health care sites in the city host a “Fresh Prescription” program where participants are prescribed fruits and vegetables that they can pick up at Farmers Markets and Eastern Market Farm Stand locations.

---

**2017 NUMBERS**

- **Farmers Markets**: 8
- **Eastern Market Farm Stands**: 9*  
  *additional to Farmers Markets to avoid double counting
- **Fresh Corner Cafe - Pop-up Markets**: 15

---

**TRANSPORTATION**

The distance to food retailers is the most common measure of food access, but community leaders often cite issues of economics and transportation as most relevant to overall food access.²⁶

---

FOOD TO PEOPLE

Peaches and Greens gained national attention with their mobile produce truck focused in the 48202 zip code. The mobile truck is no longer active, but Peaches and Greens runs a produce storefront with commercial kitchen space for food entrepreneurs. Similarly, UpSouth Food Truck on the city’s Eastside was unable to maintain its routes. Fresh Corner Cafe has flipped its focus from prepared food in corner stores to farmers market pop-ups at community sites and schools. Gleaners and partners recently launched My Mobile Grocer, which is a mobile grocery store that targets residential complexes in the city and specifically areas where mobility is limited.

PEOPLE TO FOOD

Communities have been shuttling friends and neighbors to food and grocery stores for years. One of the most successful programs was run by Riverfront Eastside Congregations Initiative (RECI) which funded shuttles to Eastern Market and local grocery stores for their 17 member congregations.

Local grocers have also been offering transportation as an incentive. Prince Valley Market has offered free rides within a small service area, Indian Village Market at one point offered free rides if a resident purchased groceries there, and in 2013 Meijer partnered with the CARt pilot program, but found technology and scheduling to be barriers with senior residents. Since 2011, Walmart has been running a free shuttle bus that picks up from all the senior and low-income housing complexes.

In 2016, Detroit’s Department of Transportation (DDOT) launched Fresh Wagon express routes to Eastern Markets on Saturdays, but have had difficulty with ridership.

This past year in 2017, the Detroit Community Markets started a free shuttle program between their partner community markets and senior apartments, WIC offices, and churches.
LOCAL GROCERS

The narrative around food access in Detroit doesn’t always follow the reality. Case in point, the common belief is that Detroit is a food desert, but in many neighborhoods there are family-owned independent markets that serve the community well.

One of these is **Imperial Fresh Market** at Schaefer and Lyndon. In 2015, co-owner **Sam Shina** doubled the size of the store, adding a full-line deli and hot foods. He received assistance with the $6.4 million renovation from the Detroit Economic Growth Corp., Capital Impact Partners, JPMorgan Chase, Invest Detroit, and the W.K. Kellogg Foundation.

With chain grocers returning to the city after a 20-year hiatus, Shina said he and his family knew they needed to invest in the store to keep the community shopping there. “Our philosophy was that either we were going to be crushed by the bigger stores or we would have to step up and remodel our existing older store,” he says. “We weren’t ready to get out of the city and had to double down on the location to give it a better shopping experience for the customers.”

Shina points out that while independent stores in Detroit don’t always have the best reputation, they are competing for a share of the city’s population that continues to dwindle in some neighborhoods – and big chains and online shopping are going after those customers too. It’s an increasingly difficult environment for smaller stores, he says. Still, his decades in the business have firmly rooted him here in Detroit. “We’re blessed we’re here and blessed to be rooted in the community all these years.”
3. Addressing Emergency Food & Food Security

FOOD SECURITY

"...exists when all people, at all times, have physical and economic access to sufficient, safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life."27

In Detroit, the emergency food landscape is dominated by two large nonprofits: Gleaners Community Food Bank and Forgotten Harvest. The two organizations have recently forged stronger collaborations through data tracking and coordination of food distributions to better serve community needs.

Food security can take many forms. Supplemental food from backyard gardening can play an important role in access to healthy, local food security.

However, assistance programs like SNAP have been shown to have the greatest impact on food security and food access. It is estimated that among food-insecure households almost 60% utilize national food assistance programs like SNAP, WIC, and/or the National School Lunch Program.28

48% of households are food insecure in Detroit29

Forgotten Harvest, in collaboration with Feeding America and Data Driven Detroit, worked on developing a more locally relevant food insecurity index. The index measures six data points from the Census Bureau ACS 2014 5-year estimates.

### FOOD INSECURITY INDEX MEASURES*

- Households spending more than 30% of monthly income on housing
- Residents who moved in the past year with an annual income less than $25,000
- Households with no vehicle available
- Residents age 25+ without a high school diploma
- Percent of children with a single parent
- Census tracts over ¼ mile away from a DDOT bus stop

*Developed in partnership with Feeding America’s “Map the Meal Gap” research team and Data Driven Detroit

| WIC Project FRESH                | All women and children (age 1 and older) currently enrolled in the Detroit Health Department WIC program. | Educational program sessions at Eastern Market. $25 coupon to purchase locally grown fresh fruits and vegetables at farmers markets. | Online: [wichealth.org](http://wichealth.org)  
Call Detroit Health Department WIC offices: **313.876.4555**. |
| Senior Project FRESH/Market FRESH | Adults must be at least 60 years old. Income eligibility is based on 185% of the federal poverty level. Live in the county where coupons will be used. | Provides 10 ($2) coupons to purchase unprocessed, Michigan-grown produce. Eligible items include: berries, lettuce, tomatoes, onions, beans, honey, and more. | Anita Kanakaris,  
Detroit Area Agency on Aging  
**313.446.4444**, ext. 5841 |
| SNAP/Bridge Card                 | Gross income typically at 130% of the federal poverty level but can be higher in some states. Asset tests may apply in some states. Many low-income employed individuals. | Monthly benefits to purchase food at grocery stores, farmers’ markets, and food retail outlets across the country that accept SNAP. Benefits loaded onto an EBT card (much like a debit card). The average benefit is about $31 for the week – or about $1.47 per person, per meal. | Online: [mibridges.michigan.gov](http://mibridges.michigan.gov)  
Call Michigan Department of Health and Human Services (MDHHS): **855.275.6424** |
| Double Up Food Bucks (DUFB)      | All currently enrolled SNAP Bridge Card participants. | Spend $10 from your SNAP Bridge Card at a participating farmers market or grocery store and get another $10 to buy fresh fruits and vegetables grown in Michigan. | Visit a participating farmers market or grocery store (See flyer for locations) |
| Fresh Prescription               | Patients at participating health care providers. | Four (4) $10 coupons for fresh fruits and vegetables. | Ask your healthcare provider if they participate |
Many families utilize WIC for supplemental food during pregnancy and after their child is born until they reach age 5. However, many WIC-certified stores in Detroit do not carry adequate foods for purchase, with nearly half of stores serving as liquor stores.

Detroit was first declared to be in a hunger crisis in 1975 after City Council raised issues with how the Food Stamp (now referred to as SNAP) program made it difficult for individuals to apply, had inadequate approved retailers, and very limited distribution of funds.\(^{31}\)

In Detroit, 43% of all households rely on SNAP to put food on the table.\(^{32}\) There is a significant need for improving Detroiters’ opportunities to access healthy food. In the United Way “Asset Limited, Income Constrained, Employed” (ALICE) report, food costs were found to account for 30% of an ALICE household’s income in Wayne County.\(^{33}\)

There were 225,580 households in Detroit that fell below the ALICE income threshold in 2015 identifying an unfilled gap in what households bring in and what households need, specifically for housing, food, and other necessities.

\(^{32}\) Census Bureau, ACS 2015 5-year estimates.

FRESH WAGON OUTREACH

The foundation of community health work is that it is rooted in the people who are served. But it can be difficult to recruit youth to pursue community health careers, for a variety of reasons ranging from unfamiliarity to a lack of resources for higher education.

The Community Health Pipeline, a project of the Center for Health and Community Impact at Wayne State University, aims to change that. It draws on the various programs around the city that engage youth around food systems, healthy food access, and nutrition and help connect them with paid opportunities during high school and, eventually, support for pursuing community health majors in college.

Kalila Grant is a 10th grader at Cass Tech and worked with the Detroit Health Department on the Fresh Wagon program this summer through the pipeline. She was charged with recruiting people into the program, which entailed riding DDOT buses each week and telling people about the program, which provides free rides from various city neighborhoods to Eastern Market on Saturdays. She also worked at Eastern Market on Saturdays, promoting the program to shoppers.

While riding the bus is a new thing for her, she says the program helped her feel more empowered to talk about healthy food access within her community. “I can tell people about my experience riding the Fresh Wagon each Saturday, and get to educate the people about programs they have in the city,” she says. “When you’re with a person face to face, you can tell them anything they need to know that may not be on the website.”

She says she wants to explore the Community Health Career Pipeline further by applying for a residential program that allows them to stay in dorms and learn more about healthy eating and nutrition and how to spread the word about programs available to city residents. “This experience I had this summer is making it more interesting to learn about this,” she says. That’s very much the goal of the program - to engage and encourage youth to pursue a degree, and eventually a career, creating a healthier Detroit.
4. Supporting Sustainable Food Purchasing & Production

GOOD FOOD PURCHASING
The food economy doesn’t work without the purchase and procurement of foods. There are many different entities involved including food producers, processors, distributors, and retailers. The goal of Good Food Purchasing is to create a transparent and equitable food system built on five core values:

LOCAL ECONOMIES
Support robust regional economies by sourcing from locally-owned small and mid-sized agricultural and food processing operations.

NUTRITION
Promote health and well-being by offering generous portions of vegetables, fruit, whole grains, and minimally processed foods, while reducing salt, added sugars, saturated fats, red meats, and artificial additives.

VALUED WORKFORCE
Provide safe and healthy working conditions and fair compensation for all food-sector workers and producers from production to consumption.

ENVIRONMENTAL SUSTAINABILITY
Support sustainable production practices that reduce or eliminate synthetic pesticides and fertilizers and avoid genetic engineering in agriculture, avoid the use of hormones and antibiotics, conserve soil and water, protect and enhance wildlife habitats and biodiversity, and reduce on-farm energy and water consumption, food waste, and greenhouse gas emissions.

ANIMAL WELFARE
Provide healthy and humane care for farm animals.

5% of foods procured locally in Detroit among anchor institutions

---

34 Economic Analysis of Detroit’s Food Economy. Detroit Food and Fitness Collaborative. (2014).
FOOD PROCUREMENT

A large part of following Good Food Purchasing standards is to make sure that nutritious foods are being sourced and produced locally.

The Detroit Public Schools Community District (DPSCD) has been working to source over 20% of their food locally and to grow a considerable amount at Drew Farm.

Beyond the schools, summer food programs are some of the largest purchasers of food. The United Way of Southeastern Michigan (UWSEM) has managed Meet Up and Eat Up for a number of years and now assists partners like the Detroit Parks and Recreation Department (DPRD) with improving their summer food procurement efforts with local food businesses.
**URBAN AGRICULTURE**

Detroit is a city built on agriculture. Indigenous Anishinabeg utilized Detroit as a natural gathering place between Lake Huron, Lake Erie, and a handful of rivers and streams. The rich river soil made it easy to grow crops, hunt small game animals, and conduct trade. The French settlers of the 1760s were lured to occupy the “new world” based on promises of free farm land. Detroit’s early settler families had great success from farming the land and, eventually, making profit by breaking up and selling their land in smaller pieces.

The urban agriculture movement has long been used by Detroiter to improve their community food security, from 200 acres of Pingree Potato Patches in the 1890s, 6,600 Thrift Gardens in the 1930s, to 3,300 vacant lots as part of the Farm-A-Lot program started by Mayor Coleman A. Young in the 1970s.

Today there are 432 community gardens under cultivation in Detroit, and around 5% of the food eaten in Detroit is produced by Detroiter. In 2013, the Urban Agriculture Ordinance passed and opened a legal pathway for farms and gardens. Keep Growing Detroit estimates the market value of produce grown by Detroiter at $1.5 million per season. Growers who participate in their Grown in Detroit program, which allows gardeners and youth growers to sell their produce at market and share the profits, earn an average of $900 per season from their efforts.

**MARKET GARDENS**

There are approximately 92 market gardens in the city of Detroit. Market garden are not defined in the urban agriculture ordinance but are typically larger than a household garden, but smaller than a full-scale farm. They are typically densely planted, maximizing the amount of food that can be grown in a specific space. Market gardens are typically created to grow food for sale to farmers markets and other community-based sales.

**2017 NUMBERS**

**Backyard gardens:** 834*

*Only KGD members are tracked

**Community gardens:** 432

**Market gardens:** 92

**School gardens:** 76

---

URBAN AGRICULTURE in DETROIT
with City Council Districts

- Green circles: Community Gardens
- Purple circles: Large-scale Urban Farming (>1 acre)

Source: Keep Growing Detroit (2016), City Commons
URBAN FARMING

As urban agriculture becomes a more prominent component of the city’s landscape, large-scale projects are coming online.

LARGE-SCALE

D-Town Farms on the city’s west side farms 7 acres, under a long-term lease from the city’s Parks and Recreation Department. In addition to growing food for the community, D-Town Farms serves as an educational resource for people all over the world who come to Detroit to learn about community food security, sustainable growing, irrigation techniques, and more.

Recovery Park, a new nonprofit, takes a different approach to the more typically community-focused agriculture in Detroit. The farm grows about 10 acres of premium vegetables under high-tech hoop-houses which are then sold to high-end restaurants around the city. The proceeds from the farm work are rolled into a nonprofit which helps returning citizens, people in recovery, or those facing other barriers to employment. They work on the farm, earning livable wages, and also receive wraparound services to help them get on a path to a more stable life.

Drew Farm (DPSCD) is a 6-acre farm, along with six hoop houses at the Drew Transition Center in Detroit Public Schools. It is considered the largest school-based farm in the US. The thousands of pounds of produce grown at the farm are used in the district’s nationally renowned school lunch program; it also helps produce starter plants for the district’s School Garden Collaborative program. Students at Drew have cognitive or physical disabilities – the work at the farm helps them learn job skills while contributing to the community.

COMMUNITY SUPPORTED AGRICULTURE (CSA)

City Commons36 is a cooperative of participating farms in Detroit. Their CSA serves between 60-100 households in Detroit and nearby communities. The participating farms range in size and production, but all farms commit to safe and sustainable practices, including no synthetic fertilizers or pesticides, and soil testing to ensure safety and quality of produce. Participating farms include:

- Fields of Plenty
- Buffalo Street Farm
- Singing Tree Garden
- Food Field
- Iroquois Avenue Farm
- Occupy Yourself
- Diamante Garden
- Detroit Farm and Garden
- Oakland Avenue Urban Farm

OTHER

- Earthworks Urban Farm
- Brother Nature Produce
- Fisheye Farms
- Rising Pheasant Farms
- Freedom-Freedom Growers
- Michigan Urban Farming Initiative

---

36 City Commons, http://www.citycommonscsa.com/
URBAN FARMING

Akello Karamoko has been growing food since childhood - but as young person growing up in Detroit, he didn’t see farming as a potential career path. He began his growing career helping his mother tend the gardens and fruit trees in their backyard. Eventually a neighbor asked him to join his community garden, which he did through graduating from high school and moving on to Grand Valley State University, where he studied law. After a few semesters there, though, he realized his heart was in Detroit’s soil and came back.

Mama Hanifa Adjuman, legendary leader of the Detroit Black Community Food Security Network’s Food Warriors program, brought him on as assistant site coordinator, where he spent the next few growing seasons working with children to teach them how to grow and prepare food. From there, he moved on to Keep Growing Detroit’s garden resource program, planning for and growing the transplants that Garden Resource Program participants use in their home gardens. He also helped lead the Good Food Ambassadors Program, which hires a corps of young people to engage grocery shoppers and let them know about healthier eating and the food assistance they are eligible for, such as Double Up Food Bucks, that can help them get to that goal.

Most recently, he completed the organic farmer training program at Michigan State University. These are steps to his eventual goal, to have the largest black-owned urban farm in the city. For Karamoko, it’s all about being able to give back to the community and the city that has nurtured and encouraged him, while encouraging self-reliance. “Farming is a viable career for the city, and the city should support urban farming and farming in general,” he says. “I want to give back some of the opportunities I have had through farming.”
FOOD ECONOMY

The leading industries and jobs in Detroit’s food economy reside within the fast food industry, as well as soft drink manufacturing, and snack food manufacturing. The 2014 Economic Analysis of Detroit’s Food System found that Food Service Industries grew by 6.7% between 2002 and 2012, while there was an overall 11% decline in food industry jobs.

In 2012, the U.S. Census Bureau conducted an “Economic Census” of industry and occupation sectors for the North American Industry Classification System (NAICS) at the city level. The latest economic census began in 2017, but results won’t be available until 2019.

This section will rely on “Occupational Employment Statistics” annual data for the Detroit-Dearborn-Livonia Metropolitan Division, which encompasses Wayne County. The regional impact of Detroit’s food system is best measured within the Tri-County area (Wayne, Oakland, Macomb), but annual data is unavailable.

Wayne County has seen Food Preparation and Serving Occupations remain steady with fluctuations of between 59,900 - 61,500 jobs each year with a meager 1% increase in wages between 2012 and 2016.

OPPORTUNITY & MOBILITY

The distinction of a “food desert” reflects the reality of an “opportunity desert” which shows itself in poor access to food, transportation, education, and jobs. Increasingly, research has demonstrated that gaps in access to goods and services follow gaps in employment, wages, and overall opportunity.

Detroit has the highest number of per capita African-American owned businesses in the country, yet the majority are sole-proprietor or single-employee businesses. The absence of minority businesses that are able to expand demonstrates a need for more targeted engagement.

There are numerous training programs, startup incubators, and funding and loan initiatives to help more local businesses launch, grow, and sustain. Over 200 small food businesses have participated in at least one of 20 identified programs that are working to build opportunity.

FOOD BUSINESSES STEPS

**STEP 1** Property & Business Setup

Before investing in a property, get educated and investigate whether the space meets your needs.

- Create a business plan and research funding opportunities.
- Consult a qualified real estate broker for guidance on selecting a location.
- Verify with BSEED Zoning (313.224.1317) that the property “Legal Use” matches your proposed use before signing. If not, you may need to explore “Change of Use/Occupancy,” especially if you intend to serve alcohol and will need a Liquor License.
- Contact the Detroit Health Department to obtain specific Plan Review guidelines for restaurants and food businesses.
- Establish your business. Explore the options of incorporating with the State of Michigan, filing with the IRS to get a Tax ID #, or obtain a Sales # from the Michigan Treasury.

**STEP 2** Plan Review & Inspections

Once you’ve gathered all the information you need, it’s time to plan any necessary construction.

- If your business requires construction, renovations, or a “Change of Occupancy,” you will need to apply for a Building Permit from BSEED.
- Hire an architect or engineer registered in the State of Michigan to prepare building plans.
- Submit your project plans to BSEED and the Health Department at the same time to avoid fees.
- Submit required items to the Health Department:
  - Standard Operating Procedures
  - Sample Menu
  - Manager Food Safety Certificate
  - Plan Review Worksheets

**STEP 3** Final Checks & Opening

After you have passed all the necessary inspections, you are close to opening!

- Apply for a Certificate of Occupancy or Certificate of Acceptance with BSEED.
- Complete the checklist from the City of Detroit, Business License Center (313.224.3178).
- Work with other agencies to obtain necessary licenses as applicable (i.e. Michigan Liquor Control Commission (866.813.0011)
- Pass final Health Department inspection to obtain Food Service Establishment License at least 30 days before opening.
- Schedule and pass necessary annual inspections to maintain compliance with city codes.
FOOD FUNDING

Foundations have played a major role in Detroit’s rise as a city of urban agriculture; however, that funding has been irregular over the years.

FOUNDATION FUNDING FOR URBAN AGRICULTURE in DETROIT 2006-2016

Since 2006, 632 grants have been distributed to 155 recipients in Detroit for food and nutrition related topics totaling $21M from 41 funders.43

TOP 10 RECIPIENTS OF FOUNDATION FUNDING: FOOD & NUTRITION (2006 - 2016)

1. Forgotten Harvest ($5.2M)
2. Gleaners Community Food Bank ($2.9M)
3. Eastern Market Corporation ($2.6M)
4. Greening of Detroit ($1.5M)
5. Crossroads of Michigan ($905k)
6. Juvenile Diabetes Research Foundation ($801k)
7. Fair Food Network ($771k)
8. Capuchin Soup Kitchen ($666k)
9. American Diabetes Association ($442k)
10. Edison Institute (The Henry Ford) ($375k)

While foundations have helped fill gaps, the volatility of funding and foundation priorities have made it difficult for food work to establish a strong footing in order to have long-term impact.

YOUTH PIPELINE

Young people are the future. Engaging young people in potential career pathways, skill building, and exposure to food and nutrition programming can have a positive impact on future growth and development.

Next Generation Food System Leadership Development is a new effort from the Detroit Food Policy Council to expose high school students to all aspects of the food system with hands-on experiences. The program includes lessons, field trips, community service, and good eats.

The Food Warriors Youth Development Program has been run by DBCFSN for a number of years. The program is a partnership with African-centered schools: Timbuktu Academy, Aisha Shule, and Nsoroma Academy, and helps introduce elementary students to agriculture.

Youth Growing Detroit and Youth Apprenticeships are run by Keep Growing Detroit to provide opportunities for youth to build new skills in leadership and entrepreneurship while developing a network of peers to influence change in their communities.

Good Food Ambassadors is a program run by City Food Community Concepts in partnership with the Detroit Health Department. The program attempts to change the food system with direct engagement by youth at grocery stores providing recipes, nutrition education, food assistance resources, and collecting data.

The Community Health Career Pipeline is a program at Wayne State University that partners with community-based programs that provide nutrition education services to youth in middle and high schools, as well as programs that engage youth in food systems and access initiatives.

Detroit Food Academy has a number of programs that include: an after-school leadership program that culminates in the design and launch of students’ own triple-bottom-line food business; a summer leadership program that is a paid internship focused on culinary arts and food entrepreneurship; and an advanced leadership cohort to take young food businesses to the next level.

The Greencorps program is run by the Greening of Detroit and hires high school students from Detroit each summer to help water trees, grow food, and maintain city parks and greenways.

NEXT STEPS

This report purposely makes no recommendations based on the data presented. The goal was to pull together the most recent data on Detroit’s food system so that all partners may come to the table with equal access to data and information in order to build collaborative policies and programs that benefit community members.

New questions and analyses may be proposed as a result of this report. Future efforts will be focused on updating a set of measurable food metrics on an annual basis. Reports published in consecutive years may be more limited to the specific metrics defined by governmental, nonprofit, and community stakeholders.
