"Gingko Biloba is an effective treatment for cognitive impairment, hearing & memory loss!"

Gingko Biloba is a tree extract native to China that has been widely promoted commercially to "treat cognitive impairment, improve hearing and memory loss."

Experimental analysis of individuals with hearing loss showed NO improvement upon treatments with Gingko Biloba.

The efficacy and safety of Gingko Biloba has NOT been scientifically proven to treat cognitive impairment and hearing loss. Continuous commercialization of medicine with no strong scientific evidence to back up findings remains a challenge in Western medicine.
