Doctor's should breakdown a patient's chart with the patient to make sure they understand the possible diagnosis and plans to improve their health.

Wayne State University School of Medicine

# Reflections

A growth mindset allows a doctor to become more adequate to working with multiple teams and treating multiple patients. A doctor should not only continually stay up to date with the current literature but also continually update their communication skills through team or patient feedback. This will improve a doctor's skill set both scientifically and socially.
